

# Imaging for Tomorrow.

The campaign for a new DEXA scanner.

The need for bone density scans is growing in Mercy Medical Center's Imaging Department.

As we see a higher volume of cases, the demands on the current 18-year-old DEXA scanner continue to grow, and it is unable to provide the latest features necessary because it's reached the end of life. The Prodigy P11 DEXA Scanner will use enCOREv18 software, which will support a variety of clinical applications, such as:

- Measuring total body bone composition
- Basic bone scans like spine, forearm, femur, etc.
- Advanced bone scans like pediatric, hand measurement, orthopedic knee/hip, etc.

Your help is needed to fund the purchase of a Prodigy P11 DEXA Scanner for our imaging department.
